## Teacher Key

**2. Look at the table below. What are the properties being observed?**

**The properties being observed are color, texture, shape, flexibility and water solubility.**

**2. How can observing properties be helpful in identifying problems?**

**The purpose of the lab is to identify the different materials based on their properties.**

**3. How does observing the materials' properties help to identify the materials?**

**By observing the properties of the materials, you could make an educated guess on the type of material.**
